Equinox is an incredibly versatile design that allows for a multitude of color schemes and possibilities. **Equinox** includes 8 preset colour styles for you to choose from by default.

You can choose the colour scheme that works best for your site, or create your own. The clean, lightweight design features a large amount of whitespace making it easy to alter and create your own color schemes and tweak the colors to perfection. With just a few changes to the CSS and image files using the included Adobe Fireworks Source PNG files, you can utilize any color scheme you desire.

You can select the default colour style for your site by specifying it in the Template Manager

The 8 included colour schemes are featured below, click on the thumbnails to load the color scheme and see it in action.
