A guide to the basic **Equinox** customisation options that can be configured in the template "index.php" file with a description of each of the available options and how they affect the presentation of the template.

Equinox features several built in configuration options that have been designed to be easily changed with a single control. You can take advantage of these customisation options by making changes in the **Equinox** "index.php" file. Here is a breakdown of the available options:

The image shows a screenshot of a configuration form for the Equinox template. The form is divided into two columns. The left column contains options for Style Variation (Style 1), Sidebar Width (25%), Second Column Width (25%), Enable RokZoom (checked), Template Width Style (Fixed), Template Width (990), Menu Type (MooMenu), Menu Name (mainmenu), and MooMenu bgFrame (checked). The right column contains options for MooMenu Delay (900), MooMenu Duration (400), MooMenu FPS (100), MooMenu Transition (Expo.easeOut), RokZoom Resize Duration (700), RokZoom Opacity Duration (500), RokZoom Transition (Cubic.easeOut), Font Size (Default), and Show Breadcrumbs (unchecked).

Default Style

Equinox has 8, pre-made styles that can be easily selected from the option shown below. Simply change the settings between the two " " tags to your style of choice.

RokZoom Enabled

RokZoom, a powerful and presentationally excellent script can sometimes come into conflict with other javascript libraries, you can disable it in the Template Manager.

Template Width

You have the ability to select, with ease, the width of the template. The manager setting is what you edit to either reduce or increase templates width.

Side Width

You have the ability to select, with ease, the width of the side column. The manager setting is what you edit to either reduce or increase side column width.

Second Column Width

You have the ability to select, with ease, the width of the right column. The manager setting is what you edit to either reduce or increase side column width.

Menu Name

The manager parameter controls which Joomla! menu is loaded for the horizontal navigation bar. Therefore, you can use a custom menu instead of a default menu.

Menu Type

Equinox has the 4 options for the horizontal navigation bar. You can either, select moomenu, the latest menu addition; suckerfish, the basic vertical dropdown menu; splitmenu, the popular

classic or have the area as a separate module position.

[Default Font](#)

Based on your site's needs, you can easily set the default font size of the text in your site by editing in the manager:

[Show Pathway](#)

Sometimes sites just look better with no pathway, and we've provided a convenient toggle to allow you to disable this for your site
