

A guide to the basic **Equinox** customisation options that can be configured in the template "index.php" file with a description of each of the available options and how they affect the presentation of the template.

Equinox features several built in configuration options that have been designed to be easily changed with a single control. You can take advantage of these customisation options by making changes in the **Equinox** "index.php" file. Here is a breakdown of the available options:

A screenshot of a web form for configuring the Equinox template. The form is divided into two main sections. The left section contains options for 'Style Variation' (a dropdown menu set to 'Style 1'), 'Sidebar Width' (a text input field with '25%' entered), 'Second Column Width' (a text input field with '25%' entered), 'Enable RokZoom' (radio buttons for 'Enabled' and 'Disabled', with 'Enabled' selected), 'Template Width Style' (a dropdown menu set to 'Fixed'), 'Template Width' (a text input field with '990' entered), 'Menu Type' (a dropdown menu set to 'MooMenu'), 'Menu Name' (a text input field with 'mainmenu' entered), and 'MooMenu bgFrame' (radio buttons for 'No' and 'Yes', with 'No' selected). The right section contains options for 'MooMenu Delay' (a text input field with '500' entered), 'MooMenu Duration' (a text input field with '400' entered), 'MooMenu FPS' (a text input field with '100' entered), 'MooMenu Transition' (a dropdown menu set to 'Expo.easeOut'), 'RokZoom Resize Duration' (a text input field with '700' entered), 'RokZoom Opacity Duration' (a text input field with '500' entered), 'RokZoom Transition' (a dropdown menu set to 'Cubic.easeOut'), 'Font Size' (a dropdown menu set to 'Default'), and 'Show Breadcrumbs' (radio buttons for 'No' and 'Yes', with 'No' selected).

Default Style

Equinox has 8, pre-made styles that can be easily selected from the option shown below. Simply change the settings between the two "tags" to your style of choice.

RokZoom Enabled

RokZoom, a powerful and presentationally excellent script can sometimes come into conflict with other javascript libraries, you can disable it in the Template Manager.

Template Width

You have the ability to select, with ease, the width of the template. The manager setting is what you edit to either reduce or increase templates width.

Side Width

You have the ability to select, with ease, the width of the side column. The manager setting is what you edit to either reduce or increase side column width.

Second Column Width

You have the ability to select, with ease, the width of the right column. The manager setting is what you edit to either reduce or increase side column width.

Menu Name

The manager parameter controls which Joomla! menu is loaded for the horizontal navigation bar. Therefore, you can use a custom menu instead of a default menu.

Menu Type

Equinox has the 4 options for the horizontal navigation bar. You can either, select moomenu, the latest menu addition; suckerfish, the basic vertical dropdown menu; splitmenu, the popular

classic or have the area as a separate module position.

[Default Font](#)

Based on your site's needs, you can easily set the default font size of the text in your site by editing in the manager:

[Show Pathway](#)

Sometimes sites just look better with no pathway, and we've provided a convenient toggle to allow you to disable this for your site
